Notes

- Holocaust figures are historical consensus; all others are active/recent conflict estimates subject to revision.
- Gaza War deaths are disputed by methodology — GHM direct count (~72,600) vs. modeled excess mortality (~93,000–100,000+); both ranges are cited by UN agencies.
- Russia–Ukraine civilian deaths are OHCHR-verified minimums only; actual totals are likely significantly higher due to occupied-territory gaps.
- Iran–UAE–USA figures are preliminary; the April 2026 ceasefire halted major hostilities. Iranian military casualties are disputed between IRNA (low) and IDF/US estimates (high).
- All figures exclude wounded, displaced, and indirect/excess deaths unless otherwise noted.
